# ARTHROSCOPIC DEBRIDEMENT OF SLAP LESION (TYPE I & III) AND/OR PARTIAL ROTATOR CUFF DEBRIDEMENT PROTOCOL

This rehabilitation program's goal is to return the patient/athlete to their activity/sport as quickly and safely as possible. The program is based on muscle physiology, biomechanics, anatomy and healing response.

# I. PHASE I – MOTION PHASE (Day 1 to Day 10)

Goals: Re-establish non-painful Range of Motion

Retard Muscular Atrophy Decrease pain/inflammation

Range of Motion:

- Pendulums Exercise
- Rope and Pulley
- L-bar exercises
  - Flexion/Extension
  - Abduction/adduction
  - ER/IR (Begin at 0 degrees AB, progress to 45 degrees AB, then 90 degrees AB)
- Self-stretches (capsular stretches)

Exercises: 
• Isometrics

- \* NO BICEPS Isometrics for 5-7 days Post-op
- May initiate tubing for ER/IR at 0 degrees AB late phase (usually 7-10 days s/p)

Decrease Pain/Inflammation: • Ice, NSAIDS, Modalities

# II. PHASE II – INTERMEDIATE PHASE (Week 2-4)

Goals: Regain & Improve Muscular Strength

Normalize Arthrokinematics

Improve Neuromuscular Control of Shoulder Complex

### Criteria to Progress to Phase II:

- 1. Full ROM
- 2. Minimal Pain & Tenderness
- 3. "Good" MMT of IR, ER, Flex

### Week 2:

Exercises:

- Initiate Isotonic Program with Dumbbells
  - Shoulder musculature
  - Scapulothoracic
  - Tubing ER/IR at 0 degrees Abduction
  - Sidelying External Rotation
  - Prone Rowing External Rotation
  - PNF Manual Resistance with Dynamic Stabilization
- Normalize Arthrokinematics of Shoulder Complex
  - Joint Mobilization
  - Continue Stretching of Shoulder (ER/IR at 90 degrees of Abduction)
- Initiate Neuromuscular Control Exercises
- Initiate Proprioception Training

- Initiate Trunk Exercises
- Initiate UE Endurance Exercises
- Decrease Pain/Inflammation:\* Continue use of modalities, ice, as needed

### II. PHASE II - INTERMEDIATE PHASE (Week 2-4) - Continued

### Week 3:

Exercises: • Throwers Ten Program

- Emphasis Rotator Cuff & Scapular Strengthening
- Dynamic Stabilization Drills

# III. PHASE III - DYNAMIC STRENGTHENING PHASE - (Week 4-6)

Goals: Improve Strength/Power/Endurance Improve Neuromuscular Control

Prepare Athlete to begin to throw, etc.

### Criteria to Enter Phase III:

- 1. Full non-painful ROM
- 2. No pain or tenderness
- 3. Strength 70% compared to contralateral side

Exercises:

- Continue Throwers Ten Program
- Continue dumbbell strengthening (supraspinatus, deltoid)
- Initiate Tubing Exercises in the 90/90° position for ER/IR (slow/fast sets)
- Exercises for scapulothoracic musculature
- Tubing exercises for biceps
- Initiate Plyometrics (2 hand drills progress to 1 hand drills)
- Diagonal Patterns (PNF)
- Initiate Isokinetic Strengthening
- Continue endurance exercises: neuromuscular control exercises
- Continue Proprioception Exercises

# IV. PHASE IV – RETURN TO ACTIVITY PHASE (Week 7 and Beyond)

Goals: Progressively increase activities to prepare patient for full functional return

### Criteria to Progress to Phase IV:

- 1. Full ROM
- 2. No pain or tenderness
- 3. Isokinetic Test that fulfills criteria to throw
- 4. Satisfactory Clinical Exam

Exercises:

- Initiate Interval Sport Program (i.e., throwing, tennis, etc.)
- Continue all exercises as in Phase III

(throw and train on same day), (LE and ROM on opposite days)

Progress Interval Program

Follow-up Visits:

- Isokinetic Tests
- Clinical Exam
